Table S1. Mask check (protocol §3.1, step 3): visible radius of the grayscale mean standardized frame per centre and the resulting mask radius.

Centre	Frames in the mean frame	Visible radius ρ_c (× side)
2	2820	0.5625
3	2797	0.703125
4	4850	0.703125
5	7093	0.703125

min_c ρ_c = 0.5625; final mask radius r = 0.45 (× side). Rule (§3.1): r = 0.45 if min_c ρ_c ≥ 0.45, otherwise r = 0.98 × min_c ρ_c; fallback: not used (recorded r = 0.45; min_c rho_c >= 0.45). Validity (run_meta.json mask_check_valid): true.
Values as recorded in the step-4 record (8d4c61a; package tableS4_mask_check.csv), not rounded; for centres 3–5, ρ_c equals the last point of the radial profile. Frames: every 60th grid frame of every case (256 × 256).
